Kindergarten Recommendation

K.LS.1: Living things have specific characteristics and traits.

Create a model of the animal in the video using items you find around your house. For example, a paper bowl could be a turtle shell or you could string together paper towel or toilet paper rolls to create a snake. Be creative!

1st grade Recommendations

1.LS.2: Living things survive only in environments that meet their needs.

What habitat does the animal in the video live in? Forest, field, lake, stream? Draw a picture of the animal in the habitat that it lives in. Be sure to include all the things it needs to survive including, water, food, shelter, and space!

What does the animal in the video like to eat? Research the animal's diet. Is it an herbivore, carnivore, or omnivore? Do you like to eat the same things that the animal does?

2nd grade Recommendation

2.LS.2: All living organisms today result from their ancestors, some of which may be extinct. Not all kinds of organisms that lived in the past are represented by living organisms today.

Research the life cycle of the animal in the video. Does it hatch out of an egg? Is it born live like people are? Draw a picture of each stage of the animal's life cycle.
